WORKSHOP

WORKSHOP ON HUMAN PERFORMANCE MODELLING

Chair: Tim Baines, Cranfield University, Cranfield, United Kingdom

Manufacturing companies need an understanding of worker behaviour to design systems. System modelling can be an invaluable aid to improving organisational design. Current modelling tools however, do not properly represent people and variations in their performance. This is especially the case with manufacturing system design, where computer-based simulation tools are frequently used as aids within organisational improvement programmes. This 'gap' in modelling capability is a serious limitation, and one which the *HPM-net* [<http://www.hpm-net.org>] has been set up to research. Many opportunities exist for exploitation both inside and outside manufacturing, but many challenges remain. The workshop is designed to understand current thinking and stimulate strategic research directions surrounding the Human Performance Modelling. Our work on HPM and the network would be presented.

EUROSIS was borne out of discussions with the European Community to set up a new kind of Society, which would be project driven instead of driven by pure membership and conferences.

The aim of the new Society will be to set up topic related Technical Committees which will link directly to European Projects in the field of computer simulation and related areas and to act as a knowledge pool for future European Networks of Excellence, like MOSAIC, EU-GAMENET etc...
